Command line

```
tmux attach -t target
tmux new-session -s name
tmux list-sessions / tmux ls
tmux kill-session -t target
```

Tips

- C- means Ctrl- , M- means Alt- .

- The default prefix is C-b , many folks change it to C-a .

- After C-b ? , use / to search command; n and N to navigate among results, just like vim.

- vim freezes when you hit C-s , use C-q to unfreeze.

- Many folks can attach to the same session.

- Tmux is highly configurable, google is your friend.

- Keys for copy mode is not listed here, check the manual.
